

PROFILE SUMMARY

Full Stack Developer with **3+ years** of experience in designing and developing scalable web applications using the **MERN Stack** (MongoDB, Express.js, React.js, Node.js). Strong expertise in building **RESTful APIs**, backend services, database design (MongoDB, MySQL), and responsive front-end applications using **React.js** and **JavaScript (ES6)**. Worked on healthcare (Agentic AI) and CRM platforms, delivering secure, high-performance, production-ready full-stack solutions in agile environments.

SKILLS

Front-End	HTML, CSS, Javascript (ES6), React.js, Tailwind CSS, Component-based architecture, State management, Lazy loading, Code splitting
Back-End	Node.js, Express, Java, Spring, REST APIs, Redis, Microservices, API Integration, Websockets, Queue-based Processing, BullMQ, Kafka
Database	MySQL, MongoDB
AI / GenAI	Prompt Engineering, LLM API Integration, Agentic AI Workflows, AI-driven Automation
Tools	Git, Agile, Postman, Visual Studio, JIRA, GenAI
Deployment	CI/CD, NGINX, Docker

EXPERIENCE

ProdocAI - Senior Software Engineer

December 2025 - Present

Lead Management Module

- Revamped the end-to-end Lead Management module using Node.js and MongoDB, enabling multi-channel lead ingestion from WhatsApp, Web Bot, IVR, and Meta campaigns, handling 3K–5K leads per month.
- Designed optimized data models and backend workflows to streamline lead creation, assignment, and tracking, reducing manual intervention by 30% and improving lead assignment turnaround time from minutes to seconds. Implemented database indexing and asynchronous processing to ensure stable performance under increasing load.
- Integrated Meta Lead Generation APIs using Node.js, implementing end-to-end lead ingestion with webhook-based real-time processing and queue-driven handling for high-volume data; automated CRM lead creation and intelligent distribution logic to ensure reliable processing and faster campaign-to-sales handoff.

Call Intelligence & Sentiment Analysis

- Developed AI-assisted workflow to process call transcripts and generate sentiment scores (positive/neutral/negative with confidence %), conversation summaries, and intent insights, improving customer interaction visibility and call quality monitoring.
- Built configurable script adherence scoring logic (0–100%) to evaluate agent conversations against predefined call scripts, improving compliance tracking and contributing to ~25–30% better adherence across monitored calls.

Patient & Lead Distribution

- Designed and owned a scalable patient and lead distribution system using Node.js, implementing rule-based routing (availability, shifts), queue-based processing for high-volume requests, Redis-backed low-latency state management, and AI-driven summarization and intent classification to automate lead updates and improve response efficiency.

Promotions & Campaign Analytics

- Developed AI-assisted real-time patient engagement analytics workflows to track campaign performance, patient interactions, and engagement journeys across all digital channels.
- Built patient journey and campaign intelligence pipelines to analyze engagement patterns, response trends, and conversion metrics, enabling improved campaign effectiveness and operational visibility

OneBill Software India - Software Engineer

February 2023 - November 2025

Legacy Application Revamp using React.js

- Migrated a large-scale legacy GWT application to React.js, improving application performance and reducing initial screen load time by 20%. Implemented lazy loading, code-splitting, and component-based architecture to enhance responsiveness and optimize bundle size. Delivered a production-ready UI with 50K+ LOC and supported 1,000+ test scenarios, ensuring scalability, stability, and long-term maintainability.

WebStore (Online Subscription Platform)

- Built **Next.js UI components** for high performance and stability; implemented a **Node.js API proxy** integrating **15+ REST services** with **JWT + Redis–based stateless authentication** to ensure secure, scalable data flow.

Task Management Module (CRM Application)

- Built a **CRM Task Management module** allowing users to **create, assign, and track tasks**, with **role-based access**, real-time updates, and seamless integration into existing workflows.
